

Fisher™ Control-Disk™ Rotary Valve

The Fisher Control-Disk rotary valve offers excellent throttling performance. An equal percentage flow characteristic provides an improved throttling range comparable to that of a segmented ball valve. This improved capability allows you to control closer to the target set point, regardless of process disturbances, which results in a reduction in process variability.

The valve body meets PN 10 through PN 40, CL150, and CL300 ratings. Face-to-face dimensions meet EN 558, API 609, and MSS-SP68 standards. Line centering clips provide for versatility to mount and align the same wafer style valve body in different piping configurations (ASME and EN ratings).

The Control-Disk rotary valve features an eccentrically-mounted disk with either soft or metal seal, providing capability for enhanced shutoff. The interchangeable sealing technology allows for the same valve body to accept both soft and metal seals.

Control-Disk Valve Features

- **Equal percentage flow characteristic**—An equal percentage flow characteristic provides an improved throttling range comparable to that of a segmented ball valve. This improved capability allows you to control closer to the target set point, regardless of process disturbances, which results in a reduction in process variability.
- **Global Standards**—The valve meets API, ASME, and EN standards, making it suitable for use in all world areas.
- **PEEK/PTFE bearing as standard**—The PTFE-lined PEEK bearing is a low friction, low wear bearing. It allows the valve to operate under high pressure drops for a high cycle life while maintaining low torque. The “drop-in” bearing design enables fast, easy maintenance.

W9418-2

LUGGED STYLE
(NPS 3 through NPS 12)

X1426

DOUBLE FLANGED STYLE
(NPS 3 through NPS 12)

- **Lower Operating Torques**—The equal percentage disk reduces operating torque at peak angles of disk opening.
- **Spline-ended Shaft**—The splined shaft with clamped lever and single-pivot linkage reduces lost motion between the actuator and the valve shaft.

July 2018

Control-Disk Valve

D103297X012

- **Improved shaft-disk pinning**—The improved expansion pin system ensures there is a positive, durable connection between disk and shaft. This connection reduces backlash and wear in the drive system, optimizing long-term performance. It also makes disassembly for maintenance quick and simple with no need for special tools.
- **New Spring-Loaded Shaft**—The spring in the outboard shaft provides support to the drive train and disk, enabling the shaft to be installed in both horizontal and vertical orientations with no detriment to performance or cycle life. This complements the ability to mount the actuator on the left- or right-hand side, enabling access for any installation.
- **Excellent Emissions Capabilities**—The optional ENVIRO-SEAL™ packing systems, are designed with very smooth shaft surfaces and live-loading to provide improved sealing, guiding, and loading force transmission. The seal of the ENVIRO-SEAL system can control emissions to below 100 ppm (parts per million).
- **Sour Service Capability**—Trim and bolting materials are available for applications involving sour liquids and gases. These constructions comply with NACE MR0175-2002, MR0103, and MR0175 / ISO 15156.
- **Field-Reversible Valve Action**—The actuator/valve assembly action can be converted from push-down-to-open to push-down-to-close, or vice versa, without additional parts.
- **Easy Installation**—Line-centering clips engage the line flange bolts to simplify installation and provide for centering of wafer-style valves in the pipeline. End connections are compatible with EN and ASME standards.
- **Excellent Shutoff**—Both the metal and soft seal rings have pressure-assisting sealing action that ensures tight shutoff regardless of pressure drop.
- **Long Seal Life**—The opening and closing path of the eccentric disk minimizes disk contact with the seal ring, thereby reducing seal wear, undue friction, and seating torque requirements. See figure 2.
- **Reliable Flange Gasketing Surface**—The seal retainer screws and retention clips are outside the gasket surface of the seal retainer. Spiral-wound or flat-sheet gaskets can be installed between the uninterrupted seal retainer face and the pipeline flange.
- **Integral Shaft-to-Valve Body Bonding**—Standard valve construction includes conductive packing to provide electrical bonding for hazardous area applications.
- **Powder paint as standard**—The Emerson powder paint finish offers an excellent corrosion-resistant finish to all steel parts.
- **High Temperature Capability**—The valve will operate at elevated temperatures, with the appropriate trim components.
- **Shaft Retention**—Redundant shaft retention provides added protection. The packing follower, anti-blowout ring, and shaft groove interact to hold the shaft securely in the valve body (see figure 1).
- **Travel Indication**—Additional travel indication can be achieved by using the indication line on the shaft, along with the disk position markings on the packing follower (see figure 4).

Control-Disk Valve Specifications and Materials of Construction

Table 1. Fisher Control-Disk Valve Specifications

Specifications		EN	ASME			
Valve Body Size		DN 50, 80, 100, 150, 200, 250, and 300	NPS 2, 3, 4, 6, 8, 10, and 12			
Pressure Rating		PN 10 to 40 per EN 12516-1	CL150 / 300 per ASME B16.34 (CL150-600 for NPS 2)			
Valve Body Materials		EN 1.0619 steel	WCC steel			
		EN 1.4409 stainless steel	CF3M (316L) stainless steel			
		LCC	LCC			
		CW2M ⁽¹⁾	CW2M ⁽¹⁾			
		M35-2 ⁽²⁾	M35-2			
Disk Materials	PTFE or RPTFE ⁽⁴⁾ Seal	EN 1.4409 stainless steel	CF3M stainless steel			
		CW2M	CW2M			
		M35-2	M35-2			
	Metal or UHMWPE ⁽³⁾ Seal	Chrome-plated EN 1.4409 Stainless Steel	Chrome-plated CF3M Stainless Steel			
End Connections		Mates with raised-face flanges per EN 1092-1	Mates with raised-face flanges per ASME B16.5			
Valve Body Style		Lugged with tapped or through holes, Double-Flange with through holes, and Wafer (for select sizes)				
Face-to-Face Dimensions		Meets MSS SP68, API 609, and EN 558 standards				
Shutoff		PTFE, RPTFE, or UHMWPE seal ring - Class VI per ANSI/FCI 70-2 and IEC 60534-4				
		S31600 (316 SST) seal ring - Class IV per ANSI/FCI 70-2 and IEC 60534-4				
Flow Coefficients		See Fisher Catalog 12				
Flow Direction		Standard (forward flow) is with the seal retainer facing upstream; reverse flow is permissible for soft seals only				
Flow Characteristic		Equal percentage				
Disk Rotation		Counterclockwise to open (when viewed from actuator side of valve body) through 90 degrees of disk rotation				
Shaft Diameters and Approximate Weights		See table 7				
1. This material is not listed in EN 12516-1 or ASME B16.34. See figure 6 for pressure/temperature ratings.						
2. This material is not listed in EN 12516-1. See figure 6 for pressure/temperature ratings.						
3. UHMWPE stands for ultra high molecular weight polyethylene.						
4. RPTFE is a reinforced PTFE seal.						

Table 2. Materials (Other Valve Components)

Component	Material
Shafts and Pins	S17400 (17-4PH) stainless steel, S20910 (XM-19) stainless steel, N10276, N05500
Anti-blowout Ring	N07718
Seal	PTFE, RPTFE, or UHMWPE with S31600 (316 stainless steel) or R30003 spring. Metal seal is 316 stainless steel with graphite gaskets
Bearings	PEEK/PTFE, R30006 (Alloy 6), S31600 Nitride
Packing	PTFE/carbon-filled PTFE (standard), graphite die-molded ribbon, ENVIRO-SEAL PTFE packing, ENVIRO-SEAL graphite packing
Follower Spring	N07718 with carbon-filled PEEK or S31600 spring seats
Bolting	B8M Class 2, B7M, N05500, N07718
Nuts	8M, 2HM, N04400, N10276

1. This nominal valve shaft diameter is the shaft diameter through the packing box. Use this diameter when selecting Fisher actuators.

2. Valve assembly only.

3. 48 mm for CL150 and CL300 lugged only.

4. Dimension shown is seal retainer OD. Diameter for serrated gasket surface may be smaller.
