

F10 & F50 Flow Switches

DESCRIPTION

Magnetrol® flow switches are highly reliable devices utilized to sense the start or stop of flow in horizontal pipelines containing oil and petroleum derivatives, chemicals, water, or air.

Vane-actuated Model F10 switches are used on gas or liquid flow applications in 2" or larger line sizes.

Disc actuated Model F50 switches are in-line type used for sensing clean liquids in 2" or smaller line sizes.

FEATURES

- Actuation on increasing or decreasing flow
- Special sensing elements for non-standard or high flow applications
- Designed for horizontal pipe applications
- Available switch styles include dry contact, hermetically sealed and pneumatic

Model F10

- Field adjustable
- Low pressure drop
- Process pressures to 1000 psig (69 bar)
- Process temperatures to +450° F (+232° C)
- Standard flow vanes for 2" thru 10" flow lines

Model F50

- No calibration required
- Bronze or stainless steel construction
- Process pressures to 1150 psig (79.2 bar)
- Process temperatures to +750° F (+399° C)
- Bodies for flow lines from ¾" to 2"

Model F10

Model F50

APPLICATIONS

- Pump staging or failure
- Pipeline flow detection
- Valve failure
- Loss of pipeline flow
- Pipe blockage/rupture
- Pump inlet flow protection
- Check valve blockage/leakage
- Alarm on eyewash or shower safety station

TECHNOLOGY

Model F10

Flow through the horizontal pipeline causes the pivoted vane assembly to swing in the direction of the flow. The vane assembly lifts an attraction sleeve which in turn causes the magnet to pull in and actuate the switch.

The O-ring sealed adjusting screw in the top of the enclosing tube compresses the range spring located

above the attraction sleeve. Turning the adjusting screw clockwise increases the flow rate at which the switch actuates. Adjustments can be made while the flow switch is in service.

Model F50

The rate of flow through the valve body raises or lowers the disc. This in turn raises or lowers the magnetic sleeve within its sealed non-magnetic enclosing tube. On an increasing flow rate, the magnetic sleeve rises into the

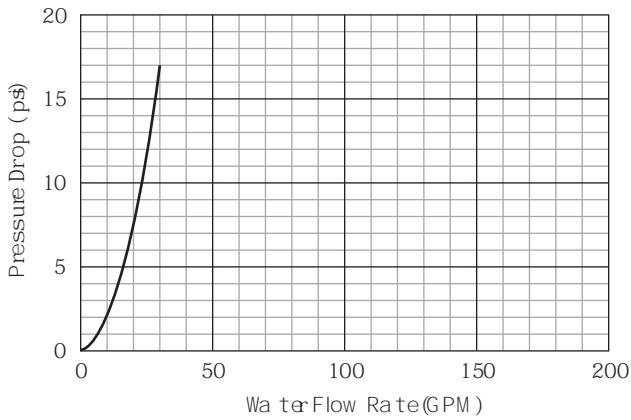

field of the permanent magnet, located outside the enclosing tube, actuating the attached switch mechanism. When the flow rate drops below the rate for which the flow disc is calibrated, a reversal of this action occurs.

TYPICAL APPLICATIONS

MODEL F50 PRESSURE DROP ACROSS SWITCH

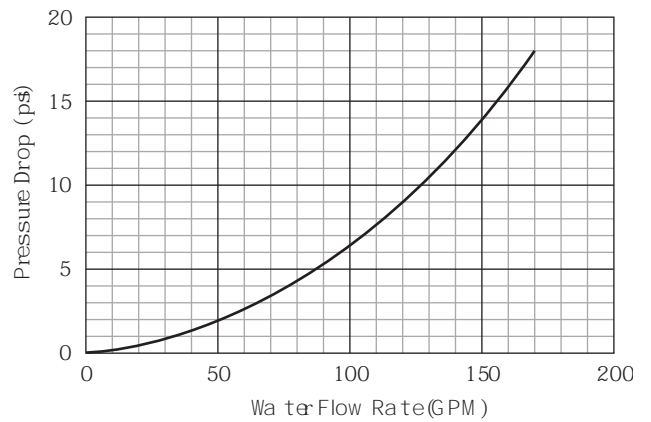

Model F50 with 3/4" NPT connection

Model F50 with 1" NPT connection

Model F50 with 1 1/2" NPT connection

Model F50 with 2" NPT connection

SPECIFICATIONS

SWITCH MECHANISMS AND ENCLOSURES

SWITCH ENCLOSURES

- TYPE 4X/7/9 aluminum enclosures
- Designed to meet Class I, Div. 1, Groups C & D and Class I, Div. 1 Group B
- Optional housing heaters and drains available for some enclosures
- Pneumatic switch mechanisms available with a NEMA 1 enclosure

SERIES B, C & D DRY CONTACT SWITCHES

- Dry contact for applications where mercury must be avoided
- Designs for AC and DC current applications
- Process temperatures to +450° F (+232° C)

SERIES HS & F HERMETICALLY SEALED SWITCHES

- Ideal for use in salt and other corrosive atmospheres
- Series “HS” is positively pressurized capsules for entire mechanism and contacts
- Process temperatures to +750° F (+399° C)

SERIES J & K PNEUMATIC SWITCHES

- Suited for applications where electrical power is not available
- Bleed and non-bleed designs
- Process temperatures to +400° F (+204° C)

BASIC ELECTRICAL RATINGS

Voltage	Switch Series and Non-Inductive Ampere Rating				
	B	C	D	F	HS
120 VAC	15.00	15.00	10.00	0.25	5.00
240 VAC	15.00	15.00	—	—	5.00
24 VDC	6.00	10.00	10.00	4.00	5.00
120 VDC	0.50	1.00	10.00	0.30	0.50
240 VDC	0.25	0.50	3.00	—	0.25

SPECIFIC GRAVITY CORRECTION

To determine the actuating flow rates for liquids other than water (approximate viscosity of 20 centistokes or less), a specific gravity correction factor must be applied to the water flow rates given in the table. For gas/air applications, consult factory.

Model F10 Example:

The maximum adjustment for an increasing flow rate on a Model F10 with a liquid specific gravity of .70 in an 8" line is: 230 GPM x 1.20 = 276 GPM.

Model F50 Example:

The actuation flow rate of a liquid with specific gravity of 1.10 on increasing flow for a Model F50 with a 1" body and an “E” size disc is: 5.5 GPM x 0.95 = 5.2 GPM.

Specific Gravity	Multiplication Factor	Specific Gravity	Multiplication Factor
.40	1.58	.95	1.03
.45	1.49	1.00	1.00
.50	1.41	1.05	.98
.55	1.35	1.10	.95
.60	1.29	1.15	.93
.65	1.24	1.20	.91
.70	1.20	1.25	.89
.75	1.15	1.30	.88
.80	1.12	1.35	.86
.85	1.08	1.40	.85
.90	1.05	1.45	.83

① IEC Installation Instructions:

The cable entry and closing devices shall be Ex d certified suitable for the conditions of use and correctly installed.
 For ambient temperatures above +55° C or for process temperatures above +150° C, suitable heat resistant cables shall be used.
 Heat extensions (between process connection and housing) shall never be insulated.

Special conditions for safe use:

When the equipment is installed in process temperatures higher than +85° C the temperature classification must be reduced according to the following table as per IEC60079-0.

Maximum Process Temperature	Temperature Classification
< 85° C	T6
< 100° C	T5
< 135° C	T4
< 200° C	T3
< 300° C	T2

- ① Process temperatures based on -40° to +160° F (-40° to +71° C).
- ② Bronze models are rated to a maximum process temperature of +500° F (+260° C). Stainless steel models are limited to the maximum temperature of the selected switch mechanism.
- ③ On steam applications, temperature down-rated to +400° F (+204° C) process at +100° F (+40° C) ambient.
- ④ On models with bronze bodies ¾" or 1" NPT pipe sizes, consult factory for HS switches.

QUALITY

The quality assurance system in place at MAGNETROL guarantees the highest level of quality throughout the company. MAGNETROL is committed to providing full customer satisfaction both in quality products and quality service.

The MAGNETROL quality assurance system is registered to ISO 9001 affirming its commitment to known international quality standards providing the strongest assurance of product/service quality available.

ESP

Several F10 and F50 Flow Switches are available for quick shipment, usually within one week after factory receipt of a purchase order, through the Expedite Ship Plan (ESP).

To take advantage of ESP, match the color coded model number codes in the selection charts (standard dimensions apply).

ESP service may not apply to orders of ten units or more. Contact your local representative for lead times on larger volume orders, as well as other products and options.

WARRANTY

All MAGNETROL mechanical level and flow controls are warranted free of defects in materials or workmanship for five full years from the date of original factory shipment.

If returned within the warranty period; and, upon factory inspection of the control, the cause of the claim is determined to be covered under the warranty; then, MAGNETROL will repair or

replace the control at no cost to the purchaser (or owner) other than transportation.

MAGNETROL shall not be liable for misapplication, labor claims, direct or consequential damage or expense arising from the installation or use of equipment. There are no other warranties expressed or implied, except special written warranties covering some MAGNETROL products.

For additional information on the Models F10 and F50, see Instruction Manual 47-602.
