

Servotronic<sup>Digital</sup> | 615 Series  
Proportional Technology

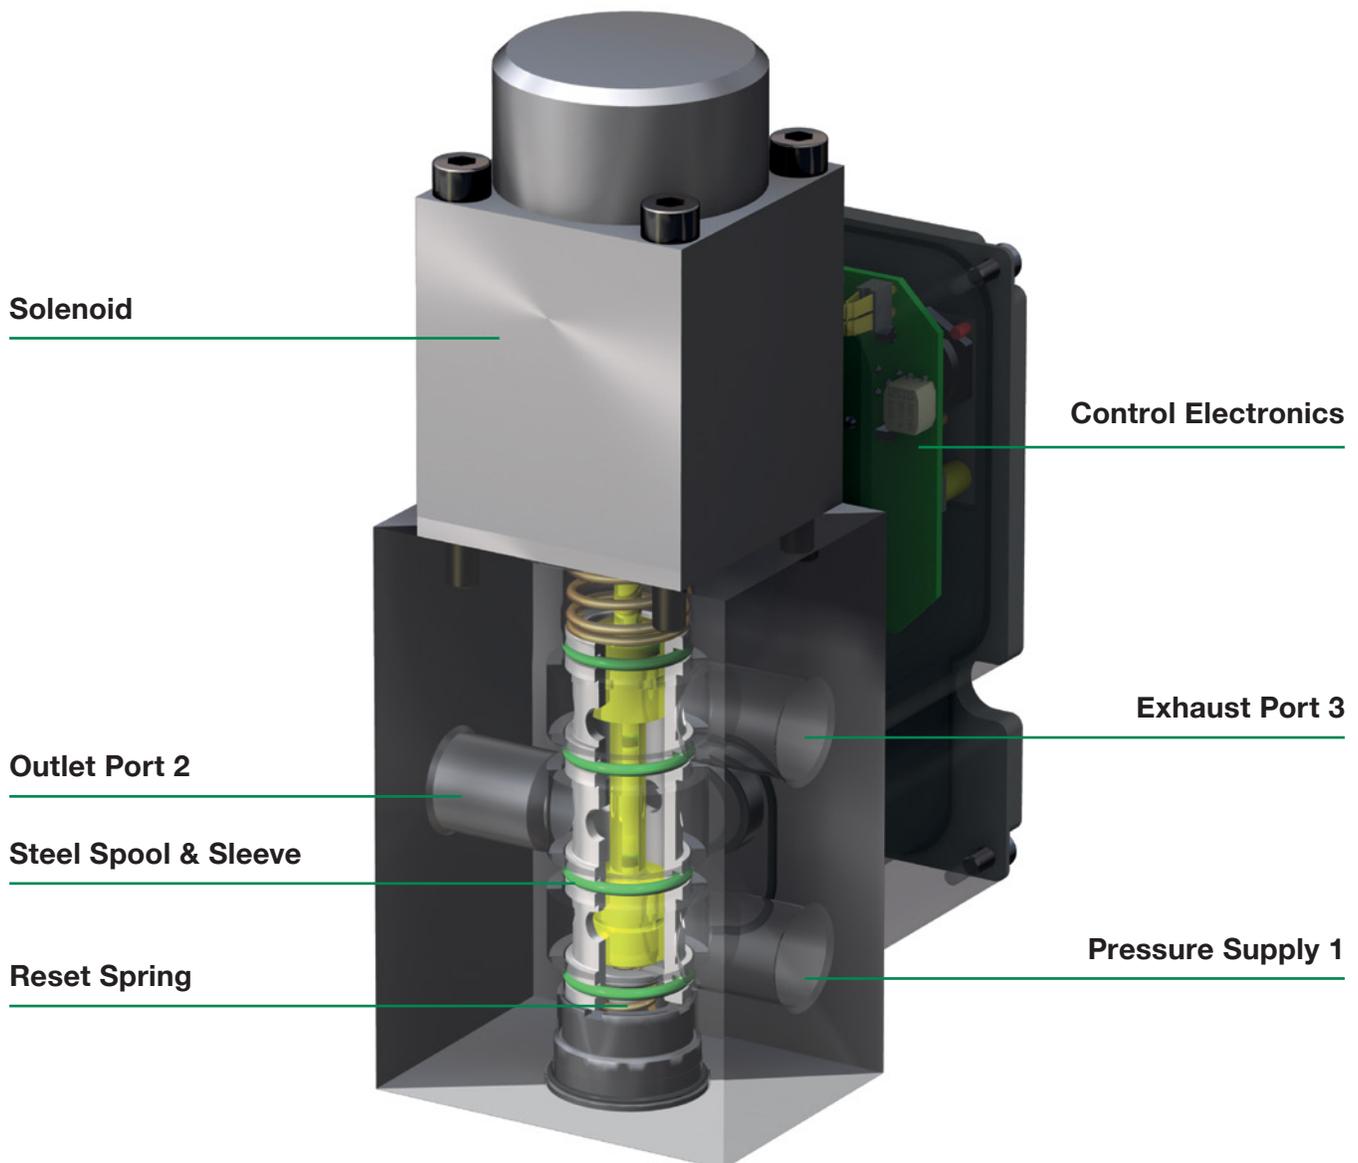

**Servotronic<sup>Digital</sup>**

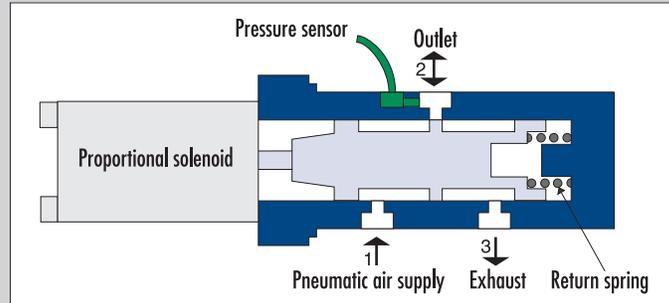

Greater versatility in automated production processes: Due to electronics, the new generation of Servotronic products increases the range of applications and performance of pneumatic components. The Servotronic<sup>Digital</sup> directly responds to all pressure control needs and indirectly meets the requirements placed in the control of physical variables, such as position, velocity, acceleration, force, mass etc. The combination of innovative pneumatic technology, high-precision mechanics and modern electronics allows for quick control of pressure in a pneumatic actuating system in relation to a signal received from the controlling electronics.

The Servotronic<sup>Digital</sup> is provided with a precision-lapped steel spool and sleeve with hardened and tempered surface enabling very high pulse frequencies at extremely short response times. The Servotronic<sup>Digital</sup> valve has a constant air consumption.

The valve can be adjusted to a specific application using the DaS software (Data Acquisition Software).

## Operating Principle

## Applying pressure

The Servotronic<sup>Digital</sup> consists of a spool and sleeve servo-valve with three ports and control electronics to define the pressure in proportion to a given setpoint.

The spool position can be changed continually to maintain a constant outlet pressure in relation to a given setpoint signal.

The Data Acquisition Software (DaS) and the RS232 interface allow the controller to be optimally adjusted to the control loop.

## Advantages

- Minimum hysteresis
- Very short response times
- Excellent flow characteristics
- Compact monobloc construction with integrated electronics and sensor
- High reliability and long service life due to precision mechanics combined with simple control technology
- Digital control
- Easy change of control parameters

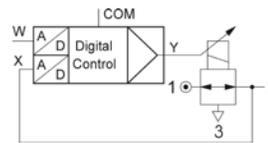

### Servotronic<sup>Digital</sup>

Servotronic<sup>Digital</sup> is a highly dynamic 3-way proportional valve with digital control particularly suitable for applications with constant flow.

Servotronic<sup>Digital</sup> stands for:

- Digital communication and control
- Direct operated valve
- Dynamic behaviour (high speed)

A special feature of the Servotronic<sup>Digital</sup> is its DaS software supplied for optimum adjustment over PC and viewing of setpoint and feedback signals. Other functions are valve diagnostics, parameter setting and maintenance.

| Fluids  | Ambient Temperature             | Body     | Internal Parts            | Seals                                   |
|---|---------------------------------|----------|---------------------------|---|
| Air or neutral gas, filtered at 50 µm, lubricated or unlubricated | 0 °C to 60 °C (32 °F to 140 °F) | Aluminum | Stainless steel and brass | FPM (fluoroelastomer) and NBR (nitrile) |

| General Valve Information        |  |
|----------------------------------|--|
| Maximum allowable pressure (MAP) | See table below  |
| Fluid Temperature                | 0 °C to 60 °C (32 °F to 140 °F)                                    |
| Pressure Range                   | 0 to 40 bar  |
| Setpoint                         | 0 – 10 V, 0 – 20 mA, 4 – 20 mA                                     |

### Connector Pin Out

| Pin  | Description                      | 6-wire cable |
|------|----------------------------------|--------------|
| 1    | 24V voltage supply               | brown        |
| 2    | Analog setpoint input            | white        |
| 3    | Supply ground                    | blue         |
|      | Analog ground*                   | yellow       |
| 4    | Analog output (feedback)         | black        |
| 5    | Digital output (pressure switch) | grey         |
| Body | EMC shield                       | shield       |

\* A 6-wire cable with separate analog ground is used for cable lengths over 2m to set off the voltage drop for the setpoint.
