Rosemount[™] 0085 Pipe Clamp Sensor

- Direct mount assembly with Rosemount 3144P Temperature Transmitter or Rosemount 648 Wireless Temperature Transmitter with Rosemount X-well[™] Technology provides accurate process temperature without the requirement of a thermowell or process penetration
- Non-intrusive design for fast and easy temperature measurement in piping applications
- Platinum RTD temperature sensors with silver or nickel tip
- Integrated temperature assemblies provide time and cost savings

ROSEMOUNT

Features and benefits

Rosemount X-well Technology provides a Complete Point Solution[™] for accurately measuring process temperature without the requirement of a thermowell or process penetration.

- Simplify temperature measurement point specification, installation and maintenance, and eliminate possible leak points
- Calculates a repeatable and accurate process temperature measurement via an in-transmitter thermal conductivity algorithm
- Measures pipe surface and ambient temperature, and utilizes the thermal conductivity properties of the installation and process piping in order to provide an accurate process measurement

Proven pipe clamp sensors deliver excellent performance and reliability

- Superior accuracy and stability
- Improved response time with silver and nickel tip

Easy implementation and installation in existing application

- Available in a wide variety of pipe sizes and materials
- Installation with only two bolts no welding needed
- Optimized surface contact by spring loaded sensor design

Minimized risk of sensor failure and unplanned shutdowns

- Avoids stresses related to flow, pressure, chemical contact, abrasion, vibration, and bending
- Maintenance of sensor without shutdown of process

Achieve optimal efficiency with Rosemount wireless transmitter offering

Measure your temperature anywhere

Explore the benefits of Complete Point Solutions from Rosemount Temperature Measurement

- An "Assemble to Transmitter" option enables Emerson to provide a complete point temperature solution, delivering an installation-ready transmitter and sensor assembly
- Emerson has a complete portfolio of single point, high density, and wireless temperature measurement solutions, allowing you to effectively measure and control your processes with the reliability you trust from Rosemount products

Experience global consistency and local support from numerous worldwide Rosemount Temperature sites

- Experienced Instrumentation Consultants help select the right product for any temperature application and advise on best installation practices
- An extensive global network of Emerson service and support personnel can be on-site when and where they are needed

Ordering information

The Rosemount 0085 Pipe Clamp Sensor is designed for fast and easy non-intrusive surface temperature measurements in piping applications.

Features include:

- Temperature range of -58 to 572 °F (-50 to 300 °C) for silver tip, -328 to 572 °F (-200 to 300 °C) for nickel tip
- Suitable for pipe sizes ½- to 48-in. (22 to 1,219 mm)
- Single or Dual Element Class A Sensor
- Assemble-to-transmitter Option

Online Product Configurator

Many products are configurable online using our Product Configurator. Select the **Configure** button or visit our website to start. With this tool's built-in logic and continuous validation, you can configure your products more quickly and accurately.

Model codes

Model codes contain the details related to each product. Exact model codes will vary; an example of a typical model code is shown in Figure 1.

Figure 1: Model Code Example

- 1. Required model components (choices available on most)
- 2. Additional options (variety of features and functions that may be added to products)

Specifications and options

See the Specifications and options section for more details on each configuration. Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See the Material selection section for more information on material selection.

The starred offerings (\star) represent the most common options and should be selected for best delivery. The non-starred offerings are subject to additional delivery lead time.

How to order Rosemount X-well Technology

Rosemount X-well Technology is for temperature monitoring applications and is not intended for control or safety applications. It is available in the Rosemount 3144P Transmitter and 648 Wireless Transmitter in a factory assembled direct mount configuration with a Rosemount 0085 Pipe Clamp Sensor. It cannot be used in a remote mount configuration. Rosemount X-well Technology will only work as specified with factory supplied and assembled Rosemount 0085 Sensor silver tipped single element sensor with an 80 mm extension length. It will not work as specified if used with other sensors.

Transmitter

Pipe Clamp Sensor

The Rosemount 3144P option code requirements are:

Code	Description	
D1-D4	luminum field mount housing	
PT	nperature measurement assembled with Rosemount X-well Technology	
A	-20 mA with digital signal based on HART [®] protocol	
ХА	ensor specified separately and assembled to transmitter	
C1	Custom configuration of date, descriptor, message, and wireless parameters (requires CDS with order)	
HR7	Configured for HART Revision 7	

The Rosemount 648 Wireless option code requirements are:

Code	Description	
РТ	nperature measurement assembled with Rosemount X-well Technology	
ХА	ensor specified separately and assembled to transmitter	
C1	Custom configuration of date, descriptor, message, and wireless parameters (requires CDS with order)	

The Rosemount 0085 Pipe Clamp Sensor option code requirements are:

Code	Description	
N	No connection head	
3	Sensor connection	
P1	Sensor type	
J	Extension type	
0080	Extension length	
ХА	Assemble sensor to specific temperature transmitter	

Rosemount X-well assemblies are available in most Rosemount 0085 Pipe Clamp sensor diameter sizes.

Typical model number of the assembly:	Rosemount 3144P and 0085
	3144P D 1A 1 NA M5 PT C1 HR7 XA
	0085 N 3 P1 J 0080 C 0169 N XA
	Rosemount 648 Wireless and 0085
	648 D X 1 D NA WA3 WK1 M5 PT C1 XA
	0085 N 3 P1 J 0080 C 0169 N XA

Overview

Rosemount pipe clamp overview

Emerson offers a range of RTDs alone, or as integrated temperature assemblies including Rosemount Temperature Transmitters and connection heads.

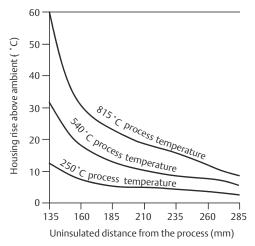

Rosemount Pipe Clamp Platinum RTD Sensors are highly linear and have a stable resistance versus temperature relationship. They are used primarily in industrial environments where high accuracy, durability, and long-term stability are required, and are designed to meet the most critical parameters of international standards: DIN EN 60751/IEC 751:1983 incorporating Amendments 1 and 2. ⁽¹⁾

Rosemount Pipe Clamp Sensors are available in single and dual element types.

Selecting the extension length for a pipe clamp sensor

A direct mounting configuration allows heat from the process, aside from ambient temperature variations, to transfer from the pipe clamp to the transmitter housing. If the expected pipe surface temperature is near or above the transmitter specification limits, consider using additional extension length or a remote mounting configuration to isolate the transmitter. Figure 2 provides an example of the relationship between transmitter housing temperature rise and distance from the process.

Figure 2: Transmitter Housing Temperature Rise vs. Uninsulated Distance from the Process

Example

The rated ambient temperature specification for the transmitter is 85 °C. If the maximum ambient temperature is 40 °C and the temperature to be measured is 540 °C, the maximum allowable housing temperature rise is the rated temperature specification limit minus the existing ambient temperature (85 - 40), or 45 °C.

As shown in Figure 2, an uninsulated distance from the process of 90 mm will result in a housing temperature rise of 22 °C. Therefore, 100 mm would be the minimum recommended distance from the process providing a safety factor of about 25 °C. A longer length, such as 150 mm, is desired to reduce errors caused by transmitter temperature effect, although in that case the transmitter may require extra support.

⁽¹⁾ $100 \Omega \text{ at } 0 \,^{\circ}\text{C}, \alpha = 0.00385 \Omega \, \text{x} \,^{\circ}\text{C}/\Omega.$

Sensor tip material configuration

The pipe clamp sensor tip is constructed from silver or nickel for better thermal conductivity and to reduce the thermal response time. The silver tip has a slightly faster response time while the nickel tip has a larger temperature range, which allows for cryogenic applications. The silver tip temperature range is -58 to 572 °F (-50 to 300 °C), and the nickel tip temperature range is -328 to 572 °F (-200 to 300 °C).

Specifications

Material selection

Emerson provides a variety of Rosemount product with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Rosemount Pipe Clamp Platinum RTD

Nominal resistance

In accordance with DIN EN 60751/IEC 751:1983 incorporating Amendments 1 and 2, the nominal resistance is defined:

100 Ω RTD at 0 °C

 α = 0.00385 Ω x °C/ Ω ., averaged between 0 and 100 °C

Limit deviations

Tolerance Class B, as standard t = \pm (0.3 + 0.005 x [t]); temperature range -328 to 572 °F (-200 to 300 °C) Tolerance Class A, as option t = \pm (0.15 + 0.002 x [t]); temperature range -58 to 572 °F (-50 to 300 °C)

Process temperature range

-328 to 572 °F (-200 to 300 °C)

Ambient temperature range

–40 to 185 °F (–40 to 85 °C)

Self-heating

0.15 K/mW when measured as defined in DIN EN 60751:1996

Insulation resistance (RTD)

1,000 M $\!\Omega$ minimum insulation resistance when measured at 500 Vdc at room temperature

Sheath material

321 SST with mineral insulated cable construction and silver or nickel tip

Lead wires

PTFE insulated, silver-coated copper wire (Figure 3)

Identification data

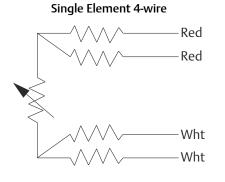

The model and serial numbers are engraved directly on the spring loaded adapter.

European Directive Information

A copy of the EU Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EU Declaration of Conformity can be found at Emerson.com/Rosemount.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

North America

The US National Electrical Code[®] (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

Any extension length	85	100	135	200	300	450	130

Table 3: Transmitter

	Process temperature (°C)						
Extension length	Gas						Dust
	T6	T5	T4	Т3	T2	T1	T130 °C
No extention	55	70	100	170	280	440	100
3-in. extension	55	70	110	190	300	450	110
6-in. extension	60	70	120	200	300	450	110
9-in extension	65	75	130	200	300	450	120

Adhering to the process temperature limitations of Table 4 will ensure that the service temperature limitations of the LCD cover are not exceeded. Process temperatures may exceed the limits defined in Table 4 if the temperature of the LCD cover is verified to not exceed the service temperatures in Table 5 and the process temperatures do not exceed the values specified in Table 3.

Table 4: Transmitter with LCD Cover - Process Temperature (°C)

Extension longth		Dust		
Extension length	T6	T5	T4T1	T130 °C
No extension	55	70	95	95
3-in. extension	55	70	100	100
6-in. extension	60	70	100	100
9-in. extension	65	75	110	110

Table 5: Transmitter with LCD Cover - Service Temperature (°C)

Extension length		Dust		
Extension length	T6	T5	T4T1	T130 °C
No extension	65	75	95	95
